RELEVANT EXPERIENCE

Senior Software Engineer

February 2024 – June 2026

Raise Robotics

- Wrote and own the majority of the robot's C++ and Python backend, including motion planning, hardware interfaces, and the ROS2 node graph
- Built an Electron, React, and Node.js/TypeScript desktop app for operating the robot, including a DXF floor-plan visualizer using Three.js, extended into a tablet kiosk mode for customer handoffs; became primary owner of all UI/UX
- Wrote a CLI tool for linting/formatting and automated UI testing with Jest, integrated into a GitHub Actions CI/CD pipeline that builds, tests, and publishes the Docker image and Electron app to AWS
- Containerized the robot software stack with Docker and built a devcontainer workflow adopted team-wide, cutting CI pipeline runtime from 30 to 10 minutes; migrated the full ROS1 stack to ROS2 in Python and wrote a NixOS flake to automate robot-host Linux configuration
- Mentored a summer intern on UI features via weekly syncs, as one of only 3 engineers on the software team

Robotics Software Engineer

May 2022 – February 2024

Raise Robotics

- Joined as Raise Robotics' first full-time engineer; wrote the majority of the codebase's backend, including ROS1 motion planning and control software in C++ and Python for a 6-DOF robotic arm
- Wrote device drivers in C# and a Windows VM for hardware such as total stations and end effectors, communicating back to the Linux host
- Developed a Linux UI application in Qt6 for operating the robot and running end-to-end automated work cycles
- Helped develop closed-loop control for automated installation of curtain wall brackets on commercial building facades; traveled to construction sites to operate and hotfix up concurrently deployed robots across multiple customers
- Reconstructed the mono-repo from scratch for better organization and clearer ROS package distinction

EDUCATION

Masters of Engineering in Mechanical Engineering

August 2021 – May 2022

University of California, Berkeley

- Concentration in Control of Robotic and Autonomous Systems

Bachelor's of Science in Physics

August 2017 – April 2021

University of Redlands

- Minors in Computer Science and Mathematics
- President of Pi Mu Epsilon Chapter

PROJECTS

Scrybuy

December 2025 – Present

github.com/zabenn/scrybuy

- Built and independently maintain a TypeScript/JavaScript browser extension for Firefox and Chrome that adds real-time purchase links and pricing to Scryfall card pages; hundreds of active users
- Wrote and deployed a Python FastAPI backend integrating the ManaPool and Card Kingdom APIs to serve pricing and availability data to the extension

TECHNICAL SKILLS

Languages C++, Python, TypeScript, JavaScript, C#, Java
Web & Desktop React, Electron, Node.js, FastAPI, Three.js
DevOps & Infra Docker, GitHub Actions, AWS, NixOS, PostgreSQL, Linux, Windows
Testing & Tools Jest, Automated UI Testing, ROS1/ROS2, Git, L^AT_EX
